

entra Micronised Gypsum

**Product of
Australia**

Calcium Fertigation

An Alternative to Calcium Nitrate

Entra micronised gypsum is a fully soluble, competitively priced alternative to imported Calcium Nitrate. Used alone or in combination with Urea or UAN, Entra will provide crops with the available Calcium and Sulphur that they need.

Fully soluble for fertigation

Through center pivots, micro-sprinklers, drip and buried tape irrigation.

Secure Supply

Produced in Australia.
Packaged in 25 kg and 1 Mt bags.
Conveniently available from warehouses Australia wide.

Economical to use and competitively priced

Contact Fertec to find out how to use Entra as a source of soluble calcium, through your irrigation system.
