

Use in Cotton

- ✓ Mitigate crusting for improved seedling emergence and soil structure.
- ✓ Improve infiltration of rainfall.
- ✓ Increase soil moisture holding capacity.
- ✓ Displace sodium.

Precision application with Tow and Fert

Soil column and field ring plot work demonstrates the effectiveness of Entra applications on mitigating crusting and improving infiltration of rainfall.

Entra at the established rate of 0.5 Mt / ha delivers effective results and significant operational advantages over higher rates of bulk gypsum.

Contact Fertec to establish the best way to incorporate Entra into your soil management program

Entra for soil and water conservation
